

A Local Leader in HEALTHY Indoor Environments

AtlasCare's sophisticated commercial duct cleaning process provides superior indoor air quality for a reasonable fee. We're using state-of-the-art duct cleaning equipment, including the most sophisticated trucks of their kind in the industry.

Our robotic cleaning allows us to provide a remarkably clean result, but also to fully document the process to ensure the highest standard possible - guaranteed.

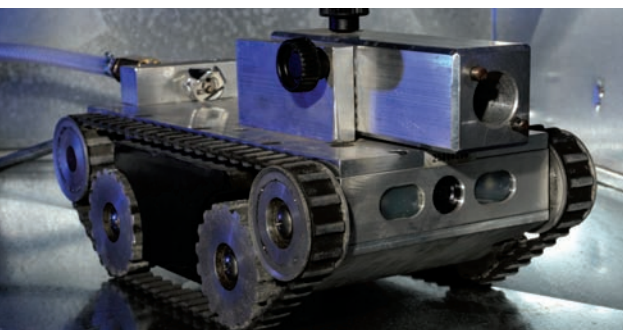

The technology is important, but the people make it happen. Clean Air Technicians at AtlasCare stand above the rest. We provide superior education at our Oakville facility - the best in the industry.

Trust AtlasCare. We've been in business for 75 years for one reason: we care to do the job right, the first time, every time.

ISO Reliability with AtlasCare

ISO Certification is your assurance of quality, and AtlasCare is the one of the few heating and cooling contractors in Canada to achieve the standards necessary for certification. AtlasCare has been officially ISO 9001-2008 certified since 2004. For a company like AtlasCare, ISO Certification means we've created processes that serve you better... and then we continually do everything we can to improve them.

ISO means we have to say what we do, do what we say and then prove it.

What's in the AIR over there?

A HEALTHY Workplace creates a HEALTHY Bottom Line

The BOTTOM Line

CAUSE...

- Mould & spores
- Bacteria & viruses
- Dust and dust mites
- Human hair and skin
- Chemical vapours
- Aerosols
- Cleaning products
- Carpet fibres
- Off-gases
- Smog from outdoor air

...EFFECT

- Chronic fatigue syndrome
- Headaches
- Flu-like symptoms
- Itchy eyes
- Poor concentration
- Errors and omissions
- Easily distracted
- Aches and soreness
- Depression
- Lack of motivation

We spend more than half of our waking hours at work. According to *Canadian Business* magazine, **time lost to illness or disability has increased each year since 2000**. In fact, notes Statistics Canada, employers lose an average of 8.5 days/year absence per employee.

A key factor affecting absence is sickness. Many cold and flu bugs float around the workplace. According to the World Health Organization, **approximately 30% of all commercial buildings have significant indoor air quality problems**.

A building's ducts are a breeding ground for hundreds of micro-sized annoyances - and the HVAC system blows a lot of this into the air. Many older buildings have outdated ventilation, while some new properties are air tight, which is good for reducing heat loss, but not so good if the indoor air isn't kept fresh.

There is a solution. With proper attention to the building's HVAC system and specifically the ducts, sickness - and lost productivity - can be significantly reduced when people are breathing healthy, clean indoor air.

Commercial Duct Cleaning: AtlasCare's 75 year history of creating healthy indoor environments, along with our ISO standards of professional quality and excellence, ensure reliable results. Highly skilled, trained and professional technicians clear the air using the industry's best technologies, without disrupting work in any way.

Indoor Air Testing: Canary Air Quality Assurance testing is an affordable, smart step to understand what's in your air. The Canary monitor records of all key parameters, analyses and compares the data to Health Canada and ASHRAE standards, providing a quick, authoritative and comprehensive online report.

- **Slash sick days** by reducing the likelihood of cold and flu-like symptoms
- **Boost work quality** through improved concentration and comfort
- **Cut energy costs** by ensuring smooth air flow
- **Extend the life of HVAC equipment** by ensuring it works only as hard as it needs to
- **Prevent equipment breakdowns** that affect productivity, deadlines, and profitability
- **Keep employees longer** because a healthy, happy staff stays put
- Be known as a **conscientious employer that cares**

FACT

Air pollution (outdoor and indoor) will result in lost productivity cost in Ontario of \$626 Million by 2015 according to the Ontario Medical Association.

FACT

A study conducted by Allergy Consumer Review found that HVAC cleaning reduced airborne particulates by about 75% and contributed significantly to a reduction of allergy and illness symptoms in the building.

75%

FACT

According to the US Environmental Protection Agency, a build-up of only 0.42" of dirt on a heating or cooling coil can decrease efficiency by 21%.

21%

FACT

About 30% of commercial buildings have significant IAQ problems.
